

Science — Cbse Chapter Test — 20 Marks

Subject: Science | Class: Class 7

Total Marks: 20 | Time Allowed: 0h 40m | CBSE

General Instructions:

1. Read all questions carefully before answering.
2. All questions are compulsory unless stated otherwise.
3. Marks for each question are indicated on the right.
4. Write neatly and legibly.

Q.NO.	QUESTIONS	MARKS
Section A Attempt all 8 questions. Each carries 1 mark(s).		
1	In a kaleidoscope, why do we see different patterns each time it is turned? (A) The light source changes direction (B) The coloured pieces inside move and create new arrangements (C) The mirrors inside rotate and change angles (D) The size of the tube changes <i>[Ch 11: Light: Shadows and Reflections]</i>	1
2	An electrician uses a screwdriver with a plastic handle and wears rubber gloves while working. Which property of plastic and rubber makes them suitable for this purpose? (A) They are good conductors of electricity (B) They are hard and durable (C) They make the tools look attractive (D) They are poor conductors of electricity and protect from electric shock <i>[Ch 4: The World of Metals and Non-metals]</i>	1
3	Which of the following metals is found in liquid state at room temperature? (A) Potassium (B) Mercury (C) Iron (D) Sodium <i>[Ch 4: The World of Metals and Non-metals]</i>	1

Q.NO.	QUESTIONS	MARKS
4	A student placed an iron nail in a glass bottle with silica gel and another nail in a bottle where it was partially dipped in water with exposure to air. After 8-10 days, what observations would the student record? (A) No deposits on either nail (B) Brown deposits on the nail in the bottle with moist air; no deposits on the nail with silica gel (C) Brown deposits on both nails (D) Brown deposits on the nail with silica gel; no deposits on the nail with moist air <i>[Ch 4: The World of Metals and Non-metals]</i>	1
5	Assertion (A): Mercury is a metal that exists in liquid state at room temperature. Reason (R): All metals are solid and hard at room temperature. (A) Both A and R are true, but R is NOT the correct explanation of A. (B) A is false but R is true. (C) A is true but R is false. (D) Both A and R are true, and R is the correct explanation of A. <i>[Ch 4: The World of Metals and Non-metals]</i>	1
6	Which type of object forms a darker shadow? (A) Reflective objects (B) Translucent objects (C) Opaque objects (D) Transparent objects <i>[Ch 11: Light: Shadows and Reflections]</i>	1
7	Which method of preventing rusting involves applying a protective layer of zinc metal on iron? (A) Greasing (B) Oiling (C) Galvanisation (D) Painting <i>[Ch 4: The World of Metals and Non-metals]</i>	1
8	Assertion (A): Some transparent objects can create faint shadows. Reason (R): Light passes almost completely through transparent materials. (A) Both A and R are true, and R is the correct explanation of A. (B) Both A and R are true, but R is NOT the correct explanation of A. (C) A is false but R is true. (D) A is true but R is false. <i>[Ch 11: Light: Shadows and Reflections]</i>	1
Section B Attempt all 3 questions. Each carries 2 mark(s).		

Q.NO.	QUESTIONS	MARKS
9	What conditions are necessary for the formation of rust on iron objects? <i>[Ch 4: The World of Metals and Non-metals]</i>	2
10	Why is sodium metal stored in kerosene and not in water or air? <i>[Ch 4: The World of Metals and Non-metals]</i>	2
11	What property of light is demonstrated when we cannot see a candle flame through a bent pipe? <i>[Ch 11: Light: Shadows and Reflections]</i>	2
Section C Attempt 2 out of 3.		
12	How do opaque, translucent, and transparent objects differ in the type of shadows they create? <i>[Ch 11: Light: Shadows and Reflections]</i>	3
	OR Compare the nature of oxides formed by metals and non-metals. Explain what happens when sulfur burns in air and the resulting product is dissolved in water. <i>[Ch 4: The World of Metals and Non-metals]</i>	
13	When sulfur powder is heated and burned, it produces a gas. This gas is dissolved in water and tested with litmus paper. How does the solution formed from sulfur oxide differ from the solution formed from magnesium oxide, and what does this tell us about the difference between metals and non-metals? <i>[Ch 4: The World of Metals and Non-metals]</i>	3
